Characteristics

Salt chlorination is a method of sanitizing swimming pools with chlorine generated by electrolysis. The electrolysis is achieved by passing the saltwater solution through a weak electric charge in an electrolytic cell, which converts sodium chloride (salt) in the water into chlorine gas. The gas is dissolved in the water and becomes sodium hypochlorite (liquid chlorine).

Safe and environmentally friendly, salt water technology brings you:

- Relaxation: Your pool is automatically disinfected
- Safety: Significant reduction in the need to store and handle chlorine
- Health and well-being: Saltwater does not irritate the eyes and dries out skin
